SLIIT COMPUTING | BUSINESS | ENGINEERING	DEPARTMENT OF INFORMATION TECHNOLOGY		
	FACULTY OF COMPUTING		
MODULE OUTLINE			
Module Name	**IT Project**		
Module Code	IT2150	**Version No.**	2025-1
Year/Level	2	**Semester**	2
Credit Points	4		
Pre-requisites	None		
Co-requisites	None		
Methods of Delivery	Lectures / Supervised Project Sessions	2 Hours/Week	
	Evaluations	4 Hours/Week	
Course web site	http://courseweb.sliit.lk		
Date of Original Approval	June, 2024		
Date of Last Approval	November, 2025		
Date of Next Review	November, 2030		
MODULE DESCRIPTION			
Aim	The aim of the module is to enable students to apply theoretical and practical knowledge of IT and project management to develop a functional software solution while demonstrating competence in planning, execution, quality assurance, and communication management through effective collaboration within a multidisciplinary team that promotes equality, diversity, and inclusion.		
Learning Outcomes	At the end of the module, the student will be able to:		
	LO1:	Apply project management techniques to plan and execute IT development projects.	
	LO2:	Implement quality assurance and communication management principles within software projects.	
	LO3:	Develop an information system solution that meets client needs, integrating security and user interface (UI) principles.	
	LO4:	Monitor project progress using standard project management tools and techniques.	
	LO5:	Collaborate within a multidisciplinary and multicultural team to deliver project outcomes that promote equality, diversity, and inclusion.	

Assessment Criteria	**Assessment Description:**		
	Project progress will be evaluated at key stages through formal presentations, practical demonstrations, and comprehensive documentation. The assessment framework is designed to monitor both group collaboration and individual contributions, ensuring continuous engagement and accountability throughout the project lifecycle.		
	Assessment Activities:		
	Project	100%	LO1-LO5
	Total	100%	
Estimated Student Workload	**Contact Hours**		
	Lectures / Supervised Project Sessions	30 Hours	
	Evaluations	60 Hours	
	Time Allocated for Assessments		
	Reading and Independent Study	110 Hours	
	Total	200 Hours	
Module Pass Requirements	To pass this module, students are required to achieve a minimum of 45% of marks and participation in group assessments		
Learning Resources	**Recommended Texts** 1. L. J. Peters, *Software Project Management: Methods and Techniques*, 1st ed. Boca Raton, FL, USA: CRC Press, 2024. 2. R. K. Wysocki, *Effective Project Management: Traditional, Agile, Extreme, Hybrid*, 8th ed. Hoboken, NJ, USA: Wiley, 2023.		

CONTENTS OF THE MODULE

1.	**Project Initiation and Scope Definition (6 hours)** • Providing an overview of the module • Defining project objectives and scope • Understanding the project life cycle • Establishing group meeting procedures and documenting meetings	LO4
2.	**Requirements Gathering, Feasibility & Security SWOT (12 hours)** • Applying requirements elicitation techniques • Conducting feasibility studies • Performing SWOT and security analysis	LO1, LO3

3.	**System Analysis, Software Architecture, Database, and UI Design (16 hours)** • Performing system modeling • Defining software architecture layers • Designing database schemas • Applying interface design principles • Creating UI mock-ups	LO3
4.	**Project Planning & Risk Management (11 hours)** • Developing Work Breakdown Structure (WBS) and Gantt Chart • Identifying and assessing project risks • Developing risk mitigation strategies	LO1, LO4
5.	**Quality and Communication Management (11 hours)** • Planning and implementing quality assurance and control activities • Managing communication within teams • Recording and documenting progress through meeting minutes	LO2, LO4
6.	**Development Phase 1 & Configuration Management (9 hours)** • Setting up the development environment and version control system • Implementing core functional features • Applying configuration management principles and tracking changes	LO3, LO4
7.	**Development Phase 2, Testing & Review (10 hours)** • Completing system development and integration • Conducting unit, integration, and security testing • Preparing testing reports and quality assurance documentation	LO1, LO2, LO3
8.	**Final Presentation, Viva, and Project Submission (15 hours)** • Conducting the final presentation and system demonstration • Submitting the final report with all supporting documentation • Completing the collaborative peer review and reflection process	LO3, LO5

LEARNING OUTCOMES TO PROGRAM OUTCOMES MAPPING												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
LO1						X						
LO2					X					X		
LO3			X									
LO4						X						
LO5									X			

PO1	Apply knowledge of mathematics, statistics, basic sciences, and computer science to solve complex problems related to the computing domain.
PO2	Identify, formulate, and analyze complex problems related to the computing domain by using established approaches in computing while recognizing their limitations, reviewing technical literature, and interpreting the results of experiments designed using appropriate research methods.
PO3	Design systems, components, or processes to meet desired needs within realistic constraints.
PO4	Apply reasoning informed by contextual knowledge in the area of information technology to assess the impacts of IT solutions in a global, economic, environmental, societal, legal, cultural, and health & safety context.
PO5	Design, implement and deploy IT solutions using industry best practices including continuous improvements, quality assurance and mitigating security risks.
PO6	Create, select, and apply appropriate computing tools, techniques and resources necessary to solve IT related real-world problems
PO7	Apply broad knowledge of sustainable development concepts and practices required for developing a solution in the information technology domain.
PO8	Apply ethical principles and commit to professional ethics, responsibilities, and norms in the field of Computing
PO9	Function effectively within a multidisciplinary and multicultural team which promotes equality, diversity, and inclusion.
PO10	Communicate on computing activities with a wide variety of audiences by means of appropriate designs, plans, reports, presentations, and instructions.
PO11	Apply broad knowledge of management principles, commercial context, change management, relevant legal matters including intellectual property rights and risk mitigation to manage projects in a multidisciplinary context.
PO12	Plan and record self-learning and continuous professional development as the foundation for lifelong learning.

GENERIC INFORMATION
Any type of plagiarism is not allowed. Plagiarism: Academic honesty is crucial to a student's credibility and self-esteem, and ultimately reflects the values and morals of the Institute as whole. A student may work together with one or a group of students discussing assignment content, identifying relevant references, and debating issues relevant to the subject. Plagiarism occurs when the work of another person, or persons, is used and presented as one's own.
